

# Data Sheet

## Virtual Private Servers

Green Cloud Hosting provide colocation, cloud computing, server hosting, connectivity, data storage and back-up solutions.

We believe that all companies, regardless of size, should have access to up to date technology that can add value and drive their business forward.

We are passionate about the benefits we can bring but we want these to be understandable to everybody - whether you're the IT manager or the financial director.

### Why use Green Cloud Hosting

- Support when you need it. Any time of day
- 24/7 access, remote hands, security and environmental monitoring
- Friendly, helpful and knowledgeable staff
- Large portfolio of products and services
- Access to multiple facilities around the UK and Europe

We love what we do!

Cloud House, Manchester, M26 1UN.

### Provisioning

- Rapidly deploy servers from your own templates or from our extensive catalogue of builds.
- Scale between lean, minimally-sized servers all the way up to huge amounts of processing, memory, and storage resource.

### Management

- Clear visibility of processing, memory, and storage resource availability and allocation.
- Monitor and alert on health conditions within your servers.
- Prioritise delivery of resource according to the relative criticality of applications within your business.

### Security

- Complete virtual isolation of each of your servers' running state from everything else in the cloud.
- All administration and management access occurs securely over SSL-encrypted connections.
- Green Cloud Hosting's server, storage and network equipment is all physically secured, both in terms of cabinet and data centre access.

### Benefits

- Easily scalable
- Cost effective
- Future proof
- Easy to manage
- 24/7 UK based technical support
- Highly resilient network
- Utilises the latest network, storage, server and hypervisor technologies
